Profile

Senior Frontend Software Engineer with **11 years of professional development experience**, specializing in **React, TypeScript, and modern JavaScript**. Builds scalable, accessible, and performant web applications and shared component libraries used across multiple product lines. Experienced in modernizing frontend tooling, managing server state with React Query, and meeting WCAG accessibility standards. Brings a full-stack perspective from **Java/Spring and REST API** work to deliver features end to end, and mentors developers to raise code quality across teams.

Technical Skills

- **Frontend:** React, TypeScript, JavaScript (ES6+), HTML, CSS (Flexbox, Grid), Redux, Angular
- **Frontend Ecosystem:** React Query, React Router, React Table, Zod, Vite, Webpack, npm packages and shared component libraries
- **Quality & Accessibility:** WCAG accessibility, Jest, Jasmine, Karma, QUnit, ESLint, code reviews
- **Backend/Cloud:** Java, Spring Boot, REST APIs, SQL (PostgreSQL, Oracle, SQL Server), AWS, CI/CD
- **Tools/Other:** Git, Jenkins, Docker, Agile/Scrum

Professional Experience

TouchNet – Lenexa, KS
Sr. Software Engineer | Oct 2020 – Present

- Architect and maintain scalable React and TypeScript applications supporting multiple TouchNet product lines, with an emphasis on maintainability, accessibility, and performance.
- Build and maintain shared npm packages and frontend component libraries used across teams, reducing duplication and promoting UI consistency and developer velocity.
- Drive frontend performance optimization and WCAG accessibility compliance, improving load times and usability for end users.
- Modernize frontend tooling by migrating applications from Webpack to Vite, upgrading to ESLint v9, and adopting modern TypeScript-based development practices.

- Migrate client-side data flows from Redux toward React Query for server-state management and data fetching, simplifying state logic and improving reliability.
- Implement runtime API response validation with Zod, strengthening reliability when consuming backend services.
- Build complex, data-driven interfaces using React Router and React Table.
- Mentor developers and raise code quality through code reviews, automated testing, linting, and formatting standards.
- Partner with product managers, designers, and QA to turn requirements into accessible, user-friendly features from design through production support.
- Extend Java/Spring Boot microservices and REST APIs to enable new client-facing features, contributing across the stack when needed.
- Recipient of the Excellence Award (Feb 2025) and the TouchNet Values Award (Dec 2022).

Trip Mate – Kansas City, MO

Front-End Developer | Jun 2020 – Oct 2020

- Worked as a dedicated front-end developer, building new features and UI enhancements with React, Redux, TypeScript, and ES6+ for an internal back-office application.

SS&C Technologies (formerly DST) – Kansas City, MO

Sr. Software Engineer | Jun 2015 – Jun 2020

- Led the migration of a legacy BPMN application to Angular and bpmn.io, building reusable components, services, and directives and organizing features into routes and modules.
- Developed responsive interfaces using CSS Grid, Flexbox, and Angular Material, with automated tests in Jasmine and Karma.
- Architected and implemented a Microsoft Word Add-in integrated with a web-based workflow application, enabling users to create and manage letters and templates with reusable content and variable placeholders.
- Designed and built new configuration and process-monitoring screens using jQuery UI widgets to match UX team specifications, along with the supporting REST services.
- Supported clients integrating with the company's JavaScript widget API, debugging client code and advising on correct usage.
- Split a 40+ minute QUnit integration suite into parallel sub-suites by updating the Selenium test runner and Jenkins jobs, reducing overall test time and improving stability.
- Moved the application CI/CD process to AWS, creating build and deployment specifications and configuring AMIs.
- Built Java REST services and wrote optimized SQL and stored procedures for Oracle and SQL Server.
- Served as team Tech Lead, facilitating Agile ceremonies, managing the sprint backlog, and mentoring interns and junior developers.

Education

Bachelor of Science in Computer Science – University of Central Missouri, May 2015
